

Some Professional Endorsements From Within the USA and Internationally

- 1. The late Lieutenant General T. G. Genes said the following upon Captain Casey's leaving the Army to join the space program.**

“Thanks for your dedicated and outstanding assistance. Your departure will be a great loss to the Army.”

- 2. Hon. Robert Walker, Former Chairman of the House of Representatives Science Committee.**

"I have known John Casey, ... since 1986 when he began working with me and NASA on the Challenger accident investigation and when I was Chairman of the House of Representatives Science Committee. As a non-scientist, I am always reluctant to comment on anything that involves my judgment of theory, but his concept and data are of real interest and should be seriously considered inside the climate change debate now receiving so much attention."

- 3. Dr. Rich Swier – Editor Watchdogwire.com.**

“John Casey is both an expert and visionary on the causes and long-term effects of global climate change.”

“America’s best climate prediction expert is at last receiving the credit he is due. When will the rest of the media, the scientific establishment, and our leaders in Washington recognize this one man’s courage, skills, and his selfless mission to help our people prepare for the new long cold climate?”

Congratulations to John L. Casey, a man who understands climate and climate policy better than anyone, period. (Jan. 2015)

- 4. Japan, Dr. Fumio Tsunoda, Professor Emeritus of Geology, National Saitama University.**

“This book (Cold Sun) adds a brilliant page to the history of science!”

- 5. Australia, Dr. Dong Choi – Editor-in-Chief, of the New Concepts in Global Tectonics, (NCGT) Newsletter.**

“This (Cold Sun) is an Earth-shattering book!”

- 6. Bulgaria, Dr. Boris Komitov – Bulgarian Academy of Sciences.**

“... I recommend the book “Cold Sun” as being both timely and necessary. My research along with my colleagues has shown strong evidence that supports Mr. Casey’s own research that we are headed for the next climate change, one that will be between a Maunder and Dalton class minimum”

7. Norway, Dr. Ole Humlum – Professor of Physical Geography, Glaciologist, University of Oslo.

“This book represents a fascinating read and the potential consequences outlined are no less than far ranging.”

8. India, Dr. Natarajan Venkatanathan – Professor of Physics, SASTRA University.

“Cold Sun is simply a great work!”

9. Italy, Dr. Giovanni Gregori, Theoretical Physicist.

“Cold Sun” is an important contribution for understanding and facing the environmental challenge, in its multi-faceted and often disquieting manifestations.”

10. Dr. Robert Williscroft, PhD, Engineering, USN-Oceanographer, Polar Researcher.

"I have been in communication with John Casey. He is correct in his assessment that the sun is the underlying cause of climate change. It is an important insight, and I welcome his input. It is more important than ever to get the word out to the general population regarding the fundamental causes of the current warming cycle, and the forthcoming cooling cycle...." and "We...have pledged what support we have to Casey and his efforts. I think anybody with an interest in injecting a little science into the global warming charade ought to do likewise. Remember that many researchers speak out at the risk of their careers. That's why having an insider like Casey make a crusade of this is so important."

11. Piers Corbyn, astrophysicist and editor, Weatheraction.com.

"I find your statement (Summary Declaration of the Start of the Next Climate Change) ...excellent."

12. Dr. Norm Kalmanovitch, Geophysicist, Calgary, CA

"The press release, 'Obama Climate Change Advisers Holdren and Lubchenco Are Told Global Warming Is Over, Time to Prepare the US for the New Cold Era.' ...is fantastic. I don't see how anyone can work their way around it."

13. Terrence Aym, Helium.com

" Casey's organization has been at the forefront of the climate change controversy, correctly predicting ...important changes in the climate that many others missed...."

14. The Late Alan Caruba - Journalist.

“Some will dismiss Casey for not having the credentials of climatologists and meteorologists. Many with these credentials jumped on the global warming hoax by way of securing grants and other funding. A courageous few debunked global warming until it became obvious that it was a lie. There will be those who will dismiss his warning as hyperbole. In “Cold Sun” he says “A historic reduction in the energy output of the Sun has begun. The most likely outcome from this ‘solar hibernation’ will be widespread global loss of life and social, economic, and political disruption.

As the German philosopher Arthur Schopenhauer (1788-1860) said, “All truth passes through three stages. First, it is ridiculed. Second, it is violently opposed. Third, it is accepted as being self-evident.” It is very likely that as the current cooling cycle—now over 16 years old—will increase, ... Casey’s (work) , and others with traditional credentials in meteorology, climatology, geology and physics will eventually be heeded and the Big Chill will have become self-evident.”

Note: The climate book, “Cold Sun,” (2011) was revised and improved and republished as “Dark Winter” (2014). During July and August 2015, “Dark Winter” became the #1 USA best seller on Amazon.com in the categories of Astronomy and Astrophysics, Climate Change, Earth Sciences, and Weather.
